NAME

error − syscall error codes

SYNTAX

#include <error.h>

extern int **errno**;

extern int **error_intr**;
extern int **error_nomem**;
extern int **error_noent**;
extern int **error_txtbsy**;
extern int **error_io**;
extern int **error_exist**;
extern int **error_timeout**;
extern int **error_inprogress**;
extern int **error_wouldblock**;
extern int **error_again**;
extern int **error_pipe**;
extern int **error_perm**;
extern int **error_acces**;

DESCRIPTION

UNIX syscalls provide detailed error codes in the **errno** variable. The **error** library provides portable names for a variety of possible **errno** values.

SEE ALSO
