NAME

fd_move − renumber a descriptor

SYNTAX

#include <fd.h>

int **fd_move**(*to*,*from*);

int *to*;
int *from*;

DESCRIPTION

fd_move moves descriptor *from* to descriptor *to*. If *to* was already open, **fd_move** closes it. If the move is successful, **fd_move** closes *from*. Exception: if *to* and *from* are the same number, **fd_move** does nothing.

fd_move returns 0 on success, -1 on error.

SEE ALSO

dup(2), fd_copy(3)
